

1-8 Dominic says: *Illusions are fun. I like to look at them and I like to draw them!*

1. Here's an illusion and what do you see?
What did the artist mean it to be?
It is a puzzle—a point of view—
What is yours? You have one, too.

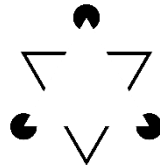

2. Look at these three drawings. What does your brain see?

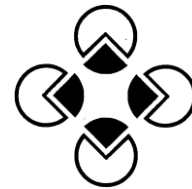

#1

2#

#3

Your brain may think that #1 and #3 have a square in the middle, but that is an illusion, created by the way parts of each circle are shaded.

The middle figure appears to be composed of two triangles. It looks that way because of the three tiny circles and breaks in the lines of the triangle. Clever.

3. I'd like to see what your brain draws in the space below.
